

## **Product Data Sheet**

	AkzoNobel Powde High Durable Powe Interpon® ACE 101	der Coating		
Product Description	exterior exposure and for u equipment and component	use as a decorative and ts. Interpon® ACE 101	polyester TGIC-Free powder coatings designed for d/or functional coating for agricultural and construction 0 coatings provide significantly improved gloss retention standing transfer efficiency and faraday cage penetration	
Powder Properties	Particle size	Suitable for electrostatic spray		
	Chemical type	Polyester TGIC-Free		
	High Gloss (60°)	≥ 80%		
	Satin Gloss (60°)	≥ 40% to ≤ 70%		
	Orange Peel	6 min (ACT ref. Panels)		
	Density	1.2 - 1.8 g/cm <sup>3</sup> Depending on Color		
	Storage	Dry cool conditions (<80°F, <25°C)		
	Shelf life	12 months, typical		
	Cure Schedule			
	(object temperature)	15-30 minutes at 350°F (180°C) 10-25 minutes at 375°F (190°C)		
	(object temperature)	8-20 minutes at 390°F (200°C)

## High Durable Powder Coating Interpon® ACE 1010

Stability at Elevated temperatures		No significant change in color or gloss after 100% overbake.	
Aluminum, steel or Zinc su			
Aluminum, steel or Zinc surfaces to be coated must be clean and free from grease. Iron phosphate and particularly lightweight zinc phosphating of ferrous metals improves corrosion resistance. Aluminum substrates may require a chromate or non-chromate conversion coating.			
Interpon® ACE 1010 powders can be applied by manual or automatic electrostatic spray equipment. It is recommended that for consistent application and appearance the product be fluidized during application. Unused powder can be reclaimed using suitable equipment and recycled through the coating system. For more detailed information please contact AKZO NOBEL technical service people.			
Interpon® ACE 1010 high durability powder is an economical and environment friendly coating. Comparing to common outdoor use powder coating, it provides better anti-corrosion performance, color stability and gloss retention after exposure. In serious application environment, a primer is necessary. However, performance is still influenced by substrate & pretreatment type and film thickness uniformity.			
This product is intended for use only by professional applicators in industrial environments and should not be used without reference to the relevant health and safety data sheet which AkzoNobel has provided to its customer. If for any reason a copy of the relevant health and safety data sheet is not immediately available the user should contact AkzoNobel to obtain a copy before using the product. When using, do not eat, drink or smoke. All dusts are respiratory irritants. Therefore, inhalation of the dust or of the vapors resulting from the cure should be avoided. Take steps to prevent skin contact, but should contact occur, wash skin with soap and water. In case of eye contact flush immediately with clean water and seek medical advice. Dust clouds of any finely divided organic material can be ignited with an electric spark or open flame. Dust and powder should not be allowed to build up on surfaces or ledges. Dust collection equipment should be used which has provision for adequate explosion release. All equipment should be electrically earthed to prevent build up of static.
