Interpon Industrial Powder Coatings

Inspirational colors and finishes for industrial coating applications

For a leader to stay out in front, you have to have the right colors at the right time, colors your customers will love and that are guaranteed to be always on trend.

Recognized for providing the most comprehensive range of premium colors, textures and finishes, Interpon's range of industrial powder coatings are chosen by some of the world's top manufacturers of outdoor and indoor products, from furniture, playground equipment, fences and railings to domestic appliances, lighting, shelving and racking.

From specific components used in agriculture or the railways to more general industrial products used in our homes and workplaces, Interpon's powder coatings are suited to any size of project, big or small, with a range of durabilities to deliver the protection, quality and style where they are needed most.

Leading benefits

Extensive color range

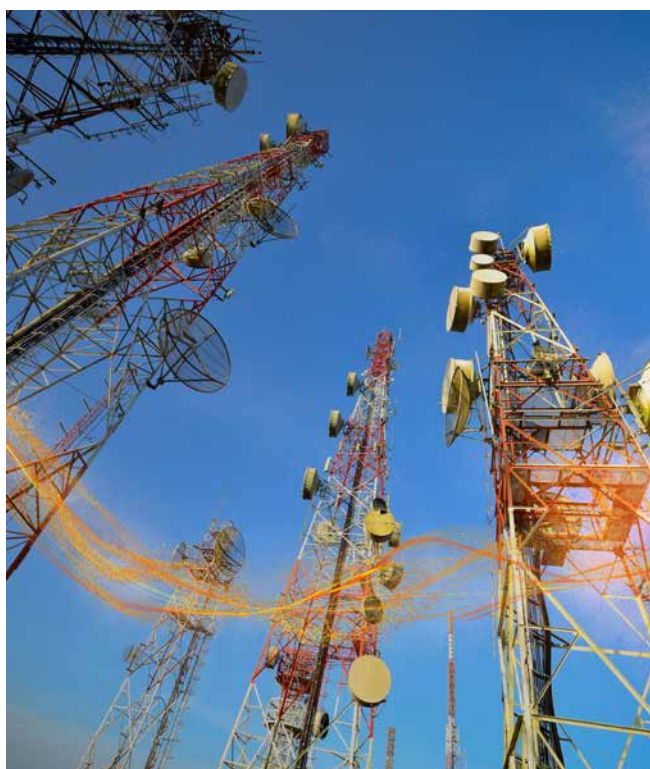

Products can be brought to life through a range of colors and finishes, including metallics and bonded metallics, to bring color and style to any application. Available in gloss, satin, matt, as well as special effects, Interpon's colors are mapped to a comprehensive range of global standards including RAL, BS, Pantone and NCS.

Excellent protection

Interpon's industrial powder coatings protect surfaces against a variety of challenges, from general wear and tear to corrosion, maintaining film and color integrity for longer even in the more extreme environments and temperatures.

Proven sustainability

As a powder coating, Interpon's products are free from VOCs, and Low-E variants enable coatings to cure faster or at lower temperatures to reduce energy consumption. Products with high-reflective properties also support a more sustainable environment by delivering a greater reflectance value to any lights installed.

Comprehensive product range

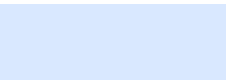

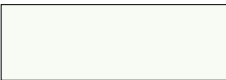

Product Series	Product description
Interpon 100	A series of epoxy-based powder coatings designed for interior use that delivers excellent corrosion protection and chemical resistance when applied to a correctly pre-treated metal substrate. Available in gloss and matte for use on indoor furniture fittings, hospital equipment, metal bed frames, household devices, lab equipment and shelving.
Interpon 600/610	A range of polyester TGIC and non-TGIC powder coatings designed for exterior exposure with light and weather resistance from just one application. The coatings sustain a longer lifespan and are available in a wide range of colors and finishes which allow your product to shine. Also available in low-bake (Low-E) range.
Interpon 700	An epoxy polyester topcoat providing color retention in case of over cure, corrosion resistance and excellent resistance to scratch and mar for a range of interior products, such as domestic appliances, lighting, data centers, shelving and racking.
Interpon Cr	A powder coating that brings the style and brilliance of chrome plating but is free of VOCs, easy to use, and has a performance that ensures it delivers even in some of the more challenging applications like metal furniture, the automotive aftermarket, components and fittings, retail displays and small household appliances.
Interpon Easy Clean	A high-performance powder coating with excellent anti-graffiti properties that ensures the easy and repeated cleaning of outdoor furniture and external equipment without impacting the integrity of the coating.
Interpon Redox	A total anti-corrosion solution. It is not one product but rather a system, with characteristics that address variables from substrate to corrosivity, making it much easier for customers to pick the perfect coating system to suit their needs.
Interpon Reflex	A powder coating that delivers outstanding light reflectance properties as a cost-effective alternative to high reflective MCPET films and high reflective papers. It has a Light Reflectance Value of 88% -100%, to maximize the light output of LEDs, CFLs or halogen bulbs while reducing energy consumption.
Interpon HT	Polyester-silicone based powder coatings that can withstand temperatures between 200°C and 550°C, without any loss of color stability, and remain fully resistant to delamination, corrosion, and cracking. Suitable for a vehicle's exhaust system, a wood-burning stove, or a barbeque, certain applications demand accommodation for extreme heat
